

As a Wisp in New Orleans I would like it to be known that we very much need additional spectrum to compete as a Wireless ISP. We are getting ready to deploy in a couple of areas where high speed is not available but do not feel comfortable as a long term business plan using 2.4. Please give us additional spectrum so that we can continue to deliver broadband where other Co's do not or do not think it is feasible. We have a building in New Orleans that DSL and Cable refuses to service broadband to. We have tried to backhaul to it from Mid City new orleans but the spectrum is all being used. The building is at the industrial canal on chef menteur hwy in New Orleans.
