

To Whom It May Concern,

As a member of the community wireless network PersonalTelco.net I and others in my community would benefit from continued unlicensing of spectrum for data networks. From the small amount portioned at 2.4Ghz our urban community has built thriving access to global information systems for all walks of life by being able to purchase and install unlicensed hardware throughout our neighborhoods. Permitting more spectrum for both high AND low power mobile devices will build an even stronger community with innovation happening at every turn. Our community needs the FCC to allow everyday people to learn and build their network without barriers. As such I object to the professional installer requirement and the inclusion of identity beacons in mobile devices.

Thank you. --Darrin Eden
