

I think the addition of more unlicensed spectrum would be very beneficial to giving more small cities and towns broadband internet access. It only makes sense and it will further promote growth of broadband access to places that would not normally get it. This would also help the congestion of the unlicensed band in more populated areas. I believe that the unlicensed spectrum is going to have a great impact on Homeland Security because of the diversity and the ever increasing infrastructure being deployed on a daily basis because of the low cost and high bandwidth that can be deployed. Please consider support of the 3650 NPRM. Thank you in advance.
